

Diego Damian

Software Engineer | Full-Stack & Mobile

Chicago, IL | 848-359-4132 | diegodamiango02@gmail.com | [LinkedIn](#) | [GitHub](#) | [Website](#)

EDUCATION

Rutgers University–New Brunswick

B.S. in Computer Science, Minor in Music Technology

New Brunswick, NJ

Sep. 2021 – May 2025

EXPERIENCE

Test Engineer

Apr. 2026 – Present

Capgemini (McDonald's account)

Chicago, IL

- Run weekly regression cycles of 170+ cases against Archy, an AI-powered drive-thru system on GCP.
- Validate new Google-delivered model and proxy releases before nationwide store rollout.
- Automate kiosk recovery with PowerShell to restart booths, roll back updates, and flash firmware.
- Debug store issues through XML config files to learn the POS data architecture.
- Configure stores via internal POS-builder tooling; track and triage LLM defects in JIRA.

Trainee Test Engineer

May 2025 – Aug. 2025

GlobalLogic

Deerfield, IL

- Built end-to-end automated test scripts in Java with Selenium, JUnit, and Cucumber to validate user flows.
- Refactored Gherkin scenarios, improving execution speed 40% and cross-team readability.
- Diagnosed codebase breakpoints and reported root causes to developers, improving error detection 25%.
- Maintained Tosca regression suites by updating modules to increase reusability and test stability.

Coding Coach (Python, Java)

Jan. 2025 – Jul. 2025

CodeWiz

Edison, NJ

- Taught Python and data structures to students ages 7–17 through a project-based curriculum.
- Drove 70% of students to measurable improvement within their first month.

PROJECTS

Harmoni | *React Native, Expo, Express, MongoDB, Next.js, TypeScript*

- Architected a music-compatibility matching engine unifying 3 heterogeneous music APIs (iTunes, MusicBrainz, Last.fm) into a single entity model with canonical IDs
- Building a music-based dating app matching users via a compatibility algorithm over shared artist/genre taste.
- Designed a match-scoring algorithm combining Jaccard similarity on artist/genre sets with weighted signal scoring to rank candidate compatibility 0–100.
- Built a tap-based React Native onboarding flow generating full taste profiles, persisted to MongoDB Atlas with indexed queries for real-time candidate matching.

JB Capital Lead Scorer | *Python, MySQL, Google Sheets API, REST APIs*

- Built a real estate lead pipeline ingesting 3,000+ Camden, NJ properties through cleaning, scoring, and export.
- Engineered a deterministic 0–100 scoring engine with 17+ weighted signals and tiered traceability.
- Implemented a MySQL persistence layer with batch upserts as the source of truth, surfaced via Google Sheets.

Quantitative Risk Management Tool | *Python, Streamlit, Pandas, NumPy*

- Built an interactive dashboard for financial risk metrics (VaR, CVaR, EWMA volatility, drawdowns).
- Designed a Streamlit UI with dynamic ticker, time-range, and confidence-level inputs.
- Implemented Historical and Parametric VaR with EWMA variance forecasting.

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript, C/C++, PHP, HTML/CSS

Frameworks & Libraries: React, React Native, Spring Boot, Selenium, JUnit, Cucumber, Playwright, Pandas, NumPy

Tools & Platforms: Git, REST APIs, Axios, GCP, AWS, Firebase, JIRA, PowerShell, Android Studio, Tosca

Spoken: English, Spanish

EXTRACURRICULAR

Vice-President, Music Technology Club | *Rutgers University–New Brunswick*

May 2025

- Founded the club; organized meetings, managed budgets, and led workshops and events.
